## **Cybernetics Introduces miNAS™ Gateway Option for the miSAN™ D Series iSCSI SAN.**

---

May 12, 2009, Yorktown, VA – Cybernetics today announced the immediate availability of the miNAS™ Gateway, an optional 1U Windows file server module that extends support for Windows Active Directory, DFS, CIFS, and NFS to the company's popular iSCSI SAN, the miSAN® D Series. With miNAS™ and miSAN® together, customers can take advantage of SAN and NAS functionality and benefits in a single, easy to implement solution.

The miSAN® D Series replaces direct attached disk storage with fast, centralized block level storage and block level data protection, while miNAS™ supplants file and backup servers for file and backup servers for file sharing and network-wide backup. Windows Backup is included, and optional third party backup software is available to manage backup and restore across the entire network. Customers benefit from a more efficient, multifunctional storage solution that is easy to scale as their storage requirements grow. They also take advantage of the exclusive self-protecting features of the miSAN® D Series.

Powered by Cybernetics' exclusive SANDR Technology, the miSAN® D Series protects itself from every threat to data at the disk storage level. It delivers terabytes of live storage with RAID 5 + Hot Spare for high availability with Snapshots and Active Deduplication Backups (ADB). miSAN® D Series also supports WAN synchronization and remote replication. For disaster recovery and archival storage off-site, miSAN® D Series provides serverless backup to tape and can also create portable disk backups to USB or eSATA disk. miSAN® D Series is part of a complete family of iSCSI SAN solutions which also includes the iSAN® Vault, and the 10 GbE iSAN® D Series.

Founded in 1978 and headquartered in Yorktown, Virginia, Cybernetics is a privately held corporation specializing in the design and manufacture of high performance disk, tape, and virtual tape storage solutions. The product line is built on leading edge technologies which have been rigorously tested to deliver seamless compatibility and solid reliability. Known for developing innovative – and exclusive – features, Cybernetics solutions typically provide greater functionality, data accessibility, and return on investment than competitive solutions. The company's dedication to high quality products, backed by the best in support in the industry, has made it a widely recognized leader in the data storage industry.
